Media Release

30 AUG, 2024

BRISBANE, AUST.

Gold at up to 3.2 gm per tonne reports Great Divide Mining

Having just celebrated its first birthday as a listed stock, Gold mine developer Great Divide Mining has delivered itself, and its shareholders, the best of birthday presents possible, confirmed high grade test results.

“We’ve always believed in our brown-field site development strategy,” said Justin Haines, CEO, “There’s no ifs, buts or maybe’s, we know there’s gold there because it’s been mined on the site before.”

“This is the ultimate de-risking strategy for our investors,” he said, “It’s now more the question of how much of the resource was left behind when the site was de-camped, how easy is it to access, and how much can we extend the potential resource at strike length and at depth with modern exploration technologies?”

Sampling by rock chip at the New Goldfield location, a part of GDM’s Cape project, revealed over 50% of samples returned anomalous Gold at over 5 grams per tonne, right up to 3.2 g/t.

“We are in the early stages of our exploration at New Goldfield. These early indications of prospectivity for gold are highly encouraging. Results confirm our predictions that hard-rock gold mineralisation occurs at the New Goldfield area, adjacent to the widespread alluvial goldfields of the Palmer River,” said Justin.

“So Happy Birthday GDM & Happy Birthday GDM Shareholders !!!”

Great Divide Mining (ASX:GDM)

GDM listed on the ASX on 25th August 2023. It operates four gold and base metal projects across 12 granted Queensland tenements. Its' commercial model focusses on historically significant workings, leveraging brownfield permitting opportunities, utilising details of these prior workings, targeted in-fill drilling programs and the application of modern exploration and mining technologies. Recommissioning of previously mined sites delivers significant reduction in exploration risk and ensures the company minimises its environmental impacts.

Its core values are to responsibly transition exploration projects to positive cash flow in efficient time frames.
