Media Release

Antimony 65% ... Gold 17 g/t Silver 97 g/t

Strong Antimony and Gold Results confirm Banshee prospectivity at Great Divide Mining's (ASX:GDM) Coonambula project.

Outstanding results have been reported by Dart Mining (ASX: DTM) from surface and in-situ sampling at GDM's Coonambula Antimony-Gold Project in Central Queensland, where Dart is earning an interest under a farm-in joint venture with GDM.

Sampling across the historic Banshee Mine area returned high-grade antimony up to 65.3% Sb, Gold over 17.0 g/t Au, and Silver over 97.9 g/t Ag from multiple zones of massive stibnite and veined quartz material.

"These are the highest recorded assay results to date from the Banshee Mine," said GDM's CEO Justin Haines. "This reinforces its potential as a significant Antimony-Gold-Silver system within the broader Coonambula project area."

"Dart's results add strong momentum to GDM's Queensland portfolio," he said.

"The grades being returned from Banshee are exceptional and confirm the scale of opportunity our joint venture partners are uncovering at Coonambula," said Haines.

"Antimony is a critical modern mineral, and these results demonstrate why GDM positioned early in this highly prospective district."

"Dart Mining has already commenced initial drilling at Coonambula to follow up these surface results and is working toward defining a JORC-compliant antimony-gold resource," said Haines.

Coonambula lies 70 km southeast of Evolution Mining's Cracow gold mine and 25 km southwest of the Eidsvold goldfield in a historically significant mining district. Cracow's Golden Plateau delivered over 850 koz of gold between 1932 and 1992, and since mining recommenced the Cracow fields have produced more than 2 million ounces of gold. The Eidsvold goldfield delivered around 98 koz of gold in the early 20th-century, along with documented antimony lodes historically mined in the nearby McKonkey Creek area. Located nearby, the Banshee Antimony complex, located between Cracow and Eidsvold, was worked intermittently from 1876 to 1983 producing direct shipping Antimony ore.

ENDS

Stibnite from GDM's Banshee project - Sample # BSE04 - 55.5% Antimony

Great Divide Mining Ltd (ASX: GDM)

Great Divide Mining is an Australian Gold, Antimony and critical metals miner, explorer and developer with five projects across 17 tenements (including two in application). GDM's focus is on operating producing assets within areas of historical mining and past exploration with nearby infrastructure, thus enabling rapid development. Through a staged exploration and development programme, GDM intends to generate cash flow from its initial projects to support further exploration across its portfolio of highly prospective tenements.

Dart Mining NL (ASX:DTM)

The Triumph Gold Project is Dart's first step into an advanced intrusion related gold system project in Queensland. Dart will look to develop a regional presence in Queensland through advanced stage intrusion related and epithermal gold projects. Dart is farming into the Coonambula Antimony-Gold Project in Central Queensland. Dart Mining will continue to evaluate several historic goldfields in Central and Northeast Victoria including the Rushworth Goldfield and the new porphyry and lithium province in Northeast Victoria identified by Dart. The area is prospective for precious, base, and strategic metals. Dart Mining has built a strategic and highly prospective gold exploration portfolio in Central and Northeast regions of Victoria, where historic surface and alluvial gold mining indicates the existence of potentially large gold endowment.
