Media Release

Geophysics Point to Expanded Antimony-Gold Potential at Coonambula

Great Divide Mining Ltd (ASX: GDM) today reported encouraging results from new survey work underway at the Coonambula Antimony-Gold Project in Central Queensland, operated under joint venture with Dart Mining NL (ASX: DTM).

The findings suggest the main mineralised zone extends beyond previous drilling and may continue further east and north of the historic Banshee Mine area. The data also indicate a likely fault offset that could open up a new extension of the system.

The current geophysical survey was made possible through a Queensland Government Collaborative Exploration Initiative (CEI) Grant of $181,577 (including GST), awarded to GDM in June 2025 to support advanced exploration for critical minerals across the State.

“It’s early days, but the signs are positive,” said GDM CEO Justin Haines, ”Coonambula is showing strong potential for commercial scale, and we’re seeing consistent indications of high-grade antimony and gold in a region that’s long been known for both.”

“Dart’s work on site is progressing well, and while they continue with the next survey lines, we’re already seeing clear targets for targeted follow-up drilling,” said Haines.

“The IP survey covers about 1.4 kilometres of strike length, with most of the planned lines now complete and final interpretation expected in November,” he went on.

“Once the remaining data are received, results will be combined with previous drilling and sampling to guide the next round of exploration,” said CEO Haines.

Earlier work at Coonambula has recorded Antimony grades up to 65%, and Gold assays as high as 17 grams per tonne, confirming the area’s potential as a significant antimony-gold system in Queensland’s New England Fold Belt.

“Antimony is a critical mineral, with growing demand. Our joint venture with Dart Mining gives GDM access to that market, alongside our other gold and critical metal projects across Queensland and New South Wales,” Haines added.

“These early results confirm GDM’s brown-field strategy,” he said.

Great Divide Mining Ltd (ASX: GDM)

Great Divide Mining is an Australian Gold, Antimony and critical metals miner, explorer and developer with five projects across 17 tenements (including two in application). GDM's focus is on operating producing assets within areas of historical mining and past exploration with nearby infrastructure, thus enabling rapid development. Through a staged exploration and development programme, GDM intends to generate cash flow from its initial projects to support further exploration across its portfolio of highly prospective tenements.

Dart Mining NL (ASX:DTM)

The Triumph Gold Project is Dart's first step into an advanced intrusion related gold system project in Queensland. Dart will look to develop a regional presence in Queensland through advanced stage intrusion related and epithermal gold projects. Dart is farming into the Coonambula Antimony-Gold Project in Central Queensland. Dart Mining will continue to evaluate several historic goldfields in Central and Northeast Victoria including the Rushworth Goldfield and the new porphyry and lithium province in Northeast Victoria identified by Dart. The area is prospective for precious, base, and strategic metals. Dart Mining has built a strategic and highly prospective gold exploration portfolio in Central and Northeast regions of Victoria, where historic surface and alluvial gold mining indicates the existence of potentially large gold endowment.
